We deliver optimal results through certified know-how and standards

We achieve the high standard of our services through the high level of education and training of our employees. We rely on advanced concepts for task-specific qualification and continuous quality assurance.

Canal-Control is certified in groups I, R, D, G and S29.06 of the Quality Protection Sewer Construction (German: „Güteschutz Kanalbau“) and specialist company in accordance with § 13b of the Hamburg Wastewater Act by the Association for the Manufacture and Maintenance of Drainage Systems and Pipes e.V..

The range of services is complemented by special equipment and procedures such as computer-aided pressure testing in accordance with DIN EN 1610 and DIN 4279, filtration technology for mechanical coarse and fine filtration of dirt and dust residues from pressure pipelines, as well as sewer ventilators and pipe locating devices.

Through TÜV Nord, Canal-Control is a recognized specialist company according to § 19l of the Water Resources Act.

100 % climate neutral

Our services not only benefit you, but also the environment: all unavoidable emissions from our work are fully offset through a GOLD Standard certified carbon offset project. Our work for you is therefore 100% climate neutral.

Our mission
is as pure
as water.

So that groundwater
doesn't turn into wastewater.

We specialize in inspecting pipe and sewer systems

Deposits, solids, root intrusion – pipe systems and sewers are constantly exposed to strain from debris entering through street drains, household connections and natural environmental debris.

We inspect pipes and sewes from DN 50 to DN 3000 with state-of-the-art camera systems to remove and –even better– to prevent potential blockages. In combination with our interfaces to all common sewer databases, we produce high-resolution video recordings and digital photos of the irrigation system for optimal analysis and cost-efficient planning of necessary maintenance and repair measures.

Of course, we also perform the legally required leak tests for you: Tightness is a must to protect our groundwater!

We perform trenchless pipe renovation

We use modern, sustainable and cost-efficient methods to repair underground drainage pipes . We continuously develop these technologies to meet ever-changing requirements. This has made us who we are today: a German leader in trenchless pipe renovation.

Our goal, even after decades, is clear: precisely consult our customers and execute our service in an uncompromising way using latest technology for best results.

Our certified consultants will prepare an economical renovation plan for you, discuss alternatives and work with you to find the best solution to fit your needs.

You can find us wherever you need us.
We are at home everywhere in Germany!

We start where others leave off.

We're all about sewer data – explore our geoinformation and document services

We put our focus on urban drainage. Our services help you to reach the next level for sewer measurments and documentation. We are experts in the following areas:

- Sewer TV documentation using panoramio images, pipeline images and shaft images as well as MPEG inspections from all manufacturers.
- Surveying underground infrastructure such as shafts, pip lines, structures, etc. using total stations, GNSS systems or 3D laser scanners.

We are Germany's leader in 3D scanning:
We scan underground, on the surface and from the air with static laser scanners. Our mobile mapping systems allow us to even scan to the move.
